

# To limit global warming

## What's the goal here?

Taking urgent action to tackle climate change and its impacts.

## Why?

As greenhouse gas levels continue to climb, climate change is occurring at much higher rates than anticipated, and its effects are evident worldwide. By addressing climate change, we can build a sustainable world for everyone. But we need to act now.

## Are farmers in the Philippines to

a businessman in London climate change is affecting everyone especially the poor and vulnerable as well as marginalized groups like women children and the elderly

## What happens if we don't take action?

What happens if we don't take action? If left unchecked, climate change will cause average global temperatures to increase beyond 3°C, and will adversely affect every ecosystem. Already, we are seeing how climate change can exacerbate storms and disasters, and threats such as food and water scarcity, which can lead to conflict. Doing nothing will end up costing us a lot more than if we take action now. We have an opportunity to take actions that will lead to more jobs, great prosperity, and better lives for all while reducing greenhouse gas emissions and

building a more resilient economy. We can do this by reducing greenhouse gas emissions and investing in clean energy, energy efficiency, and sustainable infrastructure. We can also invest in research and development to develop new technologies that will help us reduce greenhouse gas emissions and build a more resilient economy. We can also invest in education and training to help workers transition to new jobs in the clean energy sector. We can also invest in social safety nets to help workers and families who are affected by the transition to a clean energy economy. We can also invest in infrastructure to help us build a more resilient economy.
